PROFILE: Software Engineering graduate with experience in Python, backend development, AI-based applications, and automation gained through internships and academic projects. I have worked on REST API development, data processing solutions, computer vision projects, and test automation. With strong analytical thinking and problem-solving abilities. Passionate about leveraging AI and automation to solve complex problems, seeking to drive innovative software solutions in a dynamic team environment.

EDUCATION: University of Turkish Aeronautical Association, Bachelor of Science in Software Engineering | 2021 – 2026 |

WORK EXPERIENCE

- 07/2025 – 09/2025 Intern** – Nokia Alcatel – Network & Telecommunications Internship
 - Gained hands-on exposure to mobile and 5G network infrastructure, including base stations and signal transmission concepts.
 - Benchmarked 8+ document parsing frameworks by extracting tables and images from PDF; prepared a reproducible comparison report using Python.
 - Performed UI automation testing with Selenium; created and executed test scenarios aligned with Microsoft Certified Professional (MCP) practices.
 - Developed a Python-based data processing tool that analyzes CSV files and generates HTML reports with statistical summaries of network devices and components.
- 01/2025 – 02/2025 Intern** – Presidency of the Republic of Türkiye – Directorate of Communications
 - Gained exposure to IT systems and communication-based technologies in a public-sector environment.
 - Assisted in the maintenance and optimization of digital infrastructure operations, ensuring seamless data organization and system reliability.
- 08/2024 – 09/2024 Intern** – KEYDATA Information Technologies Systems
 - Developed individual projects to strengthen algorithmic thinking and application development skills.
 - Developed responsive front-end interfaces using HTML, improving the overall structure and user experience of web applications.

PROJECTS

- AI Lifestyle Coach Agent** (Graduation Project)
Tech Stack: Python, FastAPI, OpenCV, MediaPipe, SQLite, Tkinter, Ollama (LLM), REST API
 - Developed an AI-powered fitness and wellness platform that combines real-time exercise tracking, health monitoring, and personalized coaching.
 - Built a computer vision engine using MediaPipe and OpenCV to detect 33 body landmarks, count repetitions, and provide instant exercise form feedback.
 - Implemented support for 7 bodyweight exercises with real-time posture analysis and automatic calorie estimation using MET and Mifflin-St Jeor calculations.
 - Designed a FastAPI backend with 20+ REST API endpoints and a Tkinter desktop interface for cross-platform accessibility.
 - Managed user health data (exercise, sleep, hydration, calories, and daily steps) using SQLite databases and generated personalized AI recommendations through a rule-based engine integrated with a local Ollama LLM.

- **Web Scraper**

Tech Stack: Python, Selenium, pandas, openpyxl

- Developed a web scraping tool to extract product details (name, brand, rating, price, link) from Amazon using Selenium and undetected_chromedriver.
- Processed and saved collected data into Excel files on the user's desktop using pandas and openpyxl.

- **Library Management System**

Tech Stack: Java, MySQL, JSON, XML, MongoDB

- Designed and implemented a desktop-based system to handle book borrowing, returns, and inventory management.
- Integrated JSON for book metadata and created XML export functionality for borrowing records.
- Utilized MongoDB for storing and managing book reviews and ratings.

- **Object-Oriented Color & Visual Recognition System**

Tech Stack: Python, OpenCV

- Developed an image processing application to detect and classify colors using webcam input and real-time visual recognition.

- **Wellness Route App**

Tech Stack: Flutter, Dart, AudioPlayers

- Created a mobile application that helps users monitor their health activities and mental well-being through guided audio features.

TECHNICAL SKILLS

- **Programming Languages:** Python (Automation, Web Scraping, Data Processing), Java (Object-Oriented Programming), C (Basic)
- **Backend Development:** FastAPI, REST API
- **AI & Computer Vision:** OpenCV, MediaPipe, Ollama (Local LLM)
- **Web & Markup Technologies:** HTML, JSON, XML
- **Databases:** SQL, MySQL (Triggers, Stored Procedures), MongoDB (NoSQL)
- **Automation & Testing:** Selenium (UI Automation)
- **Mobile Development:** Flutter, Dart
- **Data Processing & Reporting:** pandas, openpyxl, CSV data handling and report generation
- **Tools & Platforms:** Git, GitHub, GitHub Copilot, Claude AI

LANGUAGES

- Turkish (Native), English (B2 - Upper Intermediate), German (A1 - Actively learning)
